TECHNICAL SUPPORT AND TRAINING FOR THE FOOD INDUSTRY

## Delivery of practical environmental and sustainability projects that enhance business performance

Being environmentally aware is no longer a luxury or an optional add-on for food and drink businesses. With growing consumer and supply chain interest in issues like sustainability, climate change, carbon and green house gas emissions, food waste, food packaging, and food miles; producers and processors are having to engage with an evolving portfolio of environmental issues.

In the majority of cases it makes financial sense too; ensuring good environmental performance can involve minimising waste, unnecessary energy and water use and increasing operational efficiency. There is a good financial case for being environmentally aware.

Food Technical Services is delighted to team up with Practically Green, a Highlands based business environmental consultancy. Practically Green works with clients to help them achieve practical and pragmatic improvements in their environmental performance. Clients can get reassurance and impartial reviews through market research and feasibility studies for new “greener” or environmentally friendly products or services. They are able to tap into a decade of sustainability appraisal and reporting experience, which can help them engage with this agenda through bespoke CSR Management Plans. And with carbon footprinting/green house gas emissions becoming a defining business issue, clients are able to benefit from bespoke training/awareness raising activity as well as footprint activity such as benchmarking, reporting and preparing carbon management plans.

Practically Green offer training and support on environmental issues:

- Carbon/green house gas measurement and management
- Corporate and social responsibility and sustainability appraisal
- Environmental management systems (ISO 14001),
- Energy use and review
- Setting up energy awareness campaigns for producers and processors

Projects can be delivered via Practically Green or via Food Technical Services or as a partnership - for further information or to discuss options please contact either:
